ABSTRACT OF THE DISCLOSURE

A scalable enterprise computer system having the capability to provide transaction security as well as providing subscription filtering is described. As a method of transacting 5 an event in the enterprise computer system a connection with an information broker by the publisher established after which it is determined if the event registered with the information broker. Next, a subscription corresponding to the registered event by a subscriber is accepted by the information broker, after which a platform neutral event is created that is then populated with event content which is then published to and received by the information 10 broker.
